Summaries of the evidence that the Earth has greatly expanded during geological history are available at:

[1]. Fixed-Earth and Expanding-Earth Theories -- Time for a Paradigm Shift? <<http://www.aoi.com.au/bcw/FixedorExpandingEarth.htm>> .

[2]. How Seafloor Spreading affects the level of oceans and seas -- The Expansion Equilibration Model <<http://www.aoi.com.au/bcw/Seafloor/index.htm>> .

If the mass of the Earth has remained essentially unchanged over this period, its density at the Core must have been considerably higher. For those interested, the following reference postulates a model in which the neutron content of the Core was higher.

[3]. Inside The Earth -- The Heartfire Model <<http://www.aoi.com.au/bcw/Heartfire/index.htm>> .

The usual convention that all the mass of the Earth rests at its centre may be followed in this zomb.
